The program (or project) evaluation and review technique (PERT) is a statistical tool used in project management, which was designed to analyze and represent the tasks involved in completing a given project. First developed by the United States Navy in 1958, it is commonly used in conjunction with the critical path method (CPM) that was introduced in 1957. In this guide we break down the pros and cons of other project management systems, like PERT and Critical Path, and how to use them in your next project. While Agile has many benefits, it is only one of several ways to manage a project. To choose the system that's best for you and your team, it's important to consider all the options. In this short guide, we'll look at several established project management systems, including PERT, Critical Path, and Critical Chain, to help you find new ways to make your next project a success. The evolution of project management. Ever since the Industrial Revolution, managers have been seeking better ways to manage projects and increase worker productivity. Basically, PERT, CPM are the 2 popular project management techniques, which have been created out of the need of Western industrial and military establishments to plan, schedule and control complex projects. Common Terms. To understand the whole concept of these techniques, we need to know some important terms that are used. PERT was devised in 1958 for the POLARIS missile program by the Program Evaluation Branch of the Special Projects office of the U.S.Navy, helped by the Lockheed Missile Systems division and the Consultant firm of Booz-Allen & Hamilton. Framework for PERT and CPM. Essentially, there are six steps which are common to both the techniques. The procedure is listed below The Ultimate Guide To Use PERT, CPM & Standard Deviation Together. January 13, 2020 April 8, 2013 by Praveen Malik, PMP. I have described Program Evaluation & Review Technique (PERT), Critical Path Method (CPM) and Standard Deviation in complete detail this post. I have talked about how they are related to each other and how they can be used together. What is Critical Path Method (CPM)? PERT is a Three-Point Estimation technique. This technique is based on Beta Distribution and uses 3 different duration estimates to arrive at a final estimate. Since, a single-point estimation is more risk-prone, PERT uses 3 different estimates to arrive at a final estimate. PERT reduces the Risks and improves the accuracy of estimation.
