Contents Editors' Foreword Preface to the English Edition Preface to the First Russian Edition Preface to the Second Russian Edition Condensed Contents of Volume I Shock wave structure in gases Physical and chemical kinetics in hydrodynamic processes Radiative phenomena in shock waves and in strong exploexplosions in air Thermal waves Shock waves in solids Some self-similar processes in gasdynamics Appendix: Some often. Used constants, relations between units, and formulas Author index Subject index. NASA Technical Reports Server (NTRS) 19770023144: Comparison of dynamic stall phenomena for pitching and vertical translation motions. Item Preview. remove-circle.Â Test data for vertical translation motions of the V0012 and V23010-1.58 airfoils were compared with force pitch and oscillation data to determine qualitative differences in dynamic stall behavior. Chordwise differential pressure variations were examined in detail for the test conditions displaying dynamic stall. The comparison revealed a number of differences both in the onset of stall and in the progression separation as a function of the type of motion. [4] subjectively compares different types of VTOL miniature flying robots (MFR) in several categories. 4. Table 2: Aircraft Comparisons Categories A B C D E F G H. Power Cost 2 2 2 2 1 4 3 3. Control Cost 1 1 4 2 3 3 2 1 Payload/volume 2 2 4 3 3 1 2 1. Maneuverability 4 2 2 3 3 1 3 3. Mec hanic s Simplic it y.Â ROLL RIGHT If one of the actuators is decreased or increased on the roll axis as compared to the other actuator on the same axis, a roll motion will occur. In this instance, the craft would roll towards the right. PITCH UP.
