This book describes the important ideas in these areas in a common conceptual framework. While the approach is statistical, the emphasis is on concepts rather than mathematics. Many examples are given, with a liberal use of color graphics. The book's coverage is broad, from supervised learning (prediction) to unsupervised learning. The many topics include neural networks, support vector machines, classification trees and boosting--the first comprehensive treatment of this topic in any book. This major new edition features many topics not covered in the original, including graphical models, random forests, ensemble methods, least angle regression & path algorithms for the lasso, non-negative matrix factorization, and spectral clustering. This book is published on the occasion of an exhibition at the Philadelphia Museum of Art, May 21-September 17, 1989, the National Gallery of Art, Washington, May 6-August 5, 1990, the Los Angeles County Museum of Art, August 16-November 11, 1990, and the Metropolitan Museum of Art, New York, June 4-October 13, 1991 Topics: Annenberg, Walter H., 1908-2002 Published on the occasion of the exhibition at the Philadelphia Museum of Art, April 5 to May 27, 1973 Topics: Furness, Frank, 1839-1912, Furness, Frank, 1839-1912, Architecture, Architecture.
