How to Help Your Child Develop Empathy

Feb 1, 2016

By Claire Lerner and Rebecca Parlakian

Practical tips on how parents and caregivers can help infants and toddlers develop empathy, and understand that others have different thoughts and feelings than they do.

Empathy is the ability to imagine how someone else is feeling in a particular situation and respond with care. This is a very complex skill to develop. Being able to empathize with another person means that a child:

- Understands that he is a separate individual, his own person;
- Understands that others can have different thoughts and feelings than he has;
- Recognizes the common feelings that most people experience—happiness, surprise, anger, disappointment, sadness, etc.;

- Is able to look at a particular situation (such as watching a peer saying good-bye to a parent at child care) and imagine how he—and therefore his friend—might feel in this moment; and
- Can imagine what response might be appropriate or comforting in that particular situation—such as offering his friend a favorite toy or teddy bear to comfort her.

Milestones in Empathy

Understanding and showing empathy is the result of many social-emotional skills that are developing in the first years of life. Some especially important milestones include:

- Establishing a secure, strong, loving relationship with you. Feeling accepted and understood by you helps your child learn how to accept and understand others as he grows.
- Beginning to use social referencing, at about 6 months old. This is when a baby will look to a parent or other loved one to gauge his or her reaction to a person or situation. For example, a 7-month-old looks carefully at her father as he greets a visitor to their home to see if this new person is good and safe. The parent's response to the visitor influences how the baby responds. (This is why parents are encouraged to be upbeat and reassuring—not anxiously hover—when saying good-bye to children at child care. It sends the message that “this is a good place” and “you will be okay.”) Social referencing, or being sensitive to a parent's reaction in new situations, helps the babies understand the world and the people around them.
- Developing a theory of mind. This is when a toddler (between 18 and 24 months old) first realizes that, just as he has his own thoughts, feelings and goals, others have their own thoughts and ideas, which may be different from his.
- Recognizing one's self in a mirror. This occurs between 18 and 24 months and signals that a child has a firm understanding of himself as a separate person.

What You Can Do To Nurture Empathy in Your Toddler

Empathize with your child. Are you feeling scared of that dog? He is a nice dog but he is barking really loud. That can be scary. I will hold you until he walks by.

Talk about others' feelings. Kayla is feeling sad because you took her toy car. Please give Kayla back her car and then you choose another one to play with.

Suggest how children can show empathy. Let's get Jason some ice for his boo-boo.

Read stories about feelings.

Some suggestions include:

- I Am Happy: A Touch and Feel Book of Feelings

- My Many Colored Days by Dr. Seuss
- How Are You Peeling by Saxton Freymann and Joost Elffers
- Feelings by Aiki
- The Feelings Book by Todd Parr
- Baby Happy Baby Sad by Leslie Patricelli
- Baby Faces by DK Publishing
- When I Am/Cuando Estoy by Gladys Rosa-Mendoza

Be a role model. When you have strong, respectful relationships and interact with others in a kind and caring way, your child learns from your example.

Use “I” messages. This type of communication models the importance of self-awareness: I don’t like it when you hit me. It hurts.

Validate your child’s difficult emotions. Sometimes when our child is sad, angry, or disappointed, we rush to try and fix it right away, to make the feelings go away because we want to protect him from any pain. However, these feelings are part of life and ones that children need to learn to cope with. In fact, labeling and validating difficult feelings actually helps children learn to handle them: You are really mad that I turned off the TV. I understand. You love watching your animal show. It’s okay to feel mad. When you are done being mad you can choose to help me make a yummy lunch or play in the kitchen while mommy makes our sandwiches. This type of approach also helps children learn to empathize with others who are experiencing difficult feelings.

Use pretend play. Talk with older toddlers about feelings and empathy as you play. For example, you might have your child’s stuffed hippo say that he does not want to take turns with his friend, the stuffed pony. Then ask your child: How do you think pony feels? What should we tell this silly hippo?

Think through the use of “I’m sorry.” We often insist that our toddlers say “I’m sorry” as a way for them to take responsibility for their actions. But many toddlers don’t fully understand what these words mean. While it may feel “right” for them to say “I’m sorry”, it doesn’t necessarily help toddlers learn empathy. A more meaningful approach can be to help children focus on the other person’s feelings: Chandra, look at Sierra—she’s very sad. She’s crying. She’s rubbing her arm where you pushed her. Let’s see if she is okay. This helps children make the connection between the action (shoving) and the reaction (a friend who is sad and crying).

Be patient. Developing empathy takes time. Your child probably won’t be a perfectly empathetic being by age three. (There are some teenagers and even adults who haven’t mastered this skill completely either!) In fact, a big and very normal part of being a toddler is focusing on me, mine, and I. Remember, empathy is a complex skill and will continue to develop across your child’s life.

Helping your child to develop empathy for others will help them to be school ready. Here are some ideas on how to promote this at home. If you're the parent of a preschool-aged child, you may feel pressurised to make sure your child is ready for school. But what really is "school readiness"? School readiness is the ability of a child to be independent and to be able to cope emotionally in a group of children (their class) and being ready to learn. Any encouragement that you can give to your child to help them to understand how their actions could affect others will be truly beneficial to them in their new school environment." -Nicky Hamlet-Harris. A Message from a Parent. How can I help my child develop empathy at home? How do you teach empathy to kids who struggle with social skills or focus? These activities to teach empathy can help your child learn this important skill. Some kids need extra help in developing this skill. You can teach your child to show empathy in situations throughout the day. Every parent wants to raise a child who shows empathy toward other people. You may not be sure how to teach empathy to your child, though. And teaching empathy can be especially tricky if your child has certain learning and thinking differences. A child who shows empathy is able to understand and appreciate the thoughts, feelings, and experiences of someone else. But kids with attention issues or social skills issues may struggle with this skill. For instance, some kid Empathy is a little bit of wonderful for everyone, so anything that can boost it has to be a good thing. How to develop empathy in children and adults. Being able to understand what other people might be feeling " empathy " is the cornerstone of emotional intelligence and healthy, successful relationships. Empathy is a little bit of wonderful for everyone, so anything that can boost it has to be a good thing. Research has found reading fiction is an easy way to do this. By following the inner lives of characters in fictional stories, readers are able to form ideas about the emotions, motives, and ideas of people in real life. Help your child learn how to talk about their feelings. When your child is happy, sad, or angry, tell them which emotion they're experiencing. Explain how you can tell their feelings from their body language and the tone of voice they're using. Start as soon as they can speak, or by age 2 or 3, and seize every opportunity to help your child understand their own emotions.[1] X Research source. For example, if your child has a temper tantrum, say, "I can see you're angry that we can't go to the park right now because you're shouting and stamping your feet." Praising desirable behavior can help children develop a natural sense of empathy over time. Keep in mind it's possible to overpraise. Note if your child seems to boast about their kind acts or says things like "Tell me I did a good job." Studies on how empathy develops need to look at how children understand and respond to emotions rather than their ability to recognise them. This is because children who have difficulties with empathy generally have little or no difficulty in identifying emotional reactions in others, but rather in understanding the purpose or cause of it. For most children empathy seems to come naturally. Others may be perfectly capable of understanding the emotions of others but choose to respond in an inappropriate way, such as being aggressive. On the other hand, children with autism spectrum disorder may
