SAP Press, 2015. 392 p. ISBN 978-1493212361. Want the latest and greatest info on advanced SAP HANA data modeling from the SAP HANA architects at SAP Labs in Palo Alto? Then this is the only book for you. Through step-by-step instructions and screenshots, this book will teach you how to design predictive, simulation, and optimization models. From information views to AFL models, you'll learn to scale for large datasets and performance tune your models to perfection. Learn how to model complex logic in SAP HANA Build predictive models with R, PAL, and more Use performance tuning tools SAP HANA Modelling is an activity by which we create information view. Information View is similar to dimension, cube or information provider of BW. This information view is used for creating the multi-dimensional data model. In this tutorial, you will learn-. SAP HANA Modeling Overview. SAP HANA Best Practices for Creating Information Models. SAP HANA Performance Optimization Technique. SAP HANA Modeling Overview. Modelling is an activity in which user refine or slice data in the database table by creating information view based on the business scenario. This information views can be used for Want the latest and greatest info on advanced SAP HANA data modeling from the SAP HANA architects at SAP Labs in Palo Alto? Then this is the only book for you. Through step-by-step instructions and screenshots, this book will teach you how to design predictive, simulation, and optimization models. Predictive Modeling Use PAL and R to build advanced predictive models that make the most of SAP HANA's predictive power. Performance Tuning Discover basic tuning techniques for your SAP HANA data models, such as avoiding long join paths, defining partitions, pushing down filters, and more. Highlights Modeling in SAP HANA showcases data from the databases as a business logic or a model. We can create a data model or a view with this business logic, which we can use in reporting and analytical application such as SAP Lumira, Webi, SBEE, MS Excel etc. We can make this kind of business models by processing, integrating and transforming raw data from data sources. That is, raw data taken from data sources is converted into business utilizable data by applying business logic on it. Thus, it is the next level of SAP HANA modeling for more advanced transformations and logic. In order to perform complex operations such as combining two data sets into one, we need to use the calculation view. As we inform about analytic view can measure only a transaction table.
