Functional training is best described as a continuum of exercises that teach athletes to handle their own body weight in all planes of movement. Experts emphasize that functional training trains movements, not muscles. There is no emphasis on overdeveloping strength in a particular movement; instead, emphasis is on attaining a balance between pushing and pulling strength and between knee-dominant hip extension (quadriceps and gluteals) and hip-dominant hip extension (hamstrings and gluteals).

Functional training has its roots in professional sports, where specific movement sequences are trained that have a direct transfer to the athlete's sport. Hence the word part "functional". It is based on the function that the body parts have to fulfil during the game or competition. Muscles are not seen as lone fighters, but as gears in a clockwork. Training for everyday use. Since functional training often gets by with your own body weight as training resistance, it can be scaled very well and is suitable not only for professional athletes, but also for everyday athletes. It quickly brings improvements in everyday situations where the interaction of entire muscle chains plays an important role. For example, when carrying a water tray or heavy shopping bags. Functional Training for Sports, Rehabilitation, Strength & Conditioning. Today I finished the course of Kettlebell Training run by Senior Coach Giacomo Longo and I must admit that, even though it is my fourth course with the WTA, there is always, always, something to learn and the teacher was impeccable with his desire to transmit and his exceptional physical and theoretical preparation. Functional training had become the key part of my training, so I needed to find something or someone that could help me make the difference and luckily, I discovered the WTA Functional Training Academy.
